

PRODUCT REQUIREMENTS · THE ALDERA (summary)

Buyer: 518 Group LLC, 7901 4th St N, Suite 300, St. Petersburg, FL 33702, USA · thealdera.com
Market: United States. All products sold as dietary supplements under 21 CFR 111 and 101.36.
Date: September 2026

We are asking for **your existing formulas under our label (stock formula, private label)**, not custom development. If your current formula already meets the "minimum acceptable" column, say so and quote it.

1. Seven rules that are not negotiable (pass or fail)

- 1. Mushroom raw material must be **fruiting body**. Mycelium grown on grain is not accepted.
- 2. Gummy base must be **pectin**. Gelatin is not accepted.
- 3. No **maltitol, isomaltitol, sorbitol, sucralose, aspartame, acesulfame K, added sugar or plain stevioside**.
- 4. Sea moss products: **iodine must never exceed 225 mcg per serving**.
- 5. Every batch comes with an **ISO 17025 laboratory report carrying measured numbers**. A report that states only "complies" or "≤1.0 ppm" is not accepted.
- 6. The report must carry the **legal name of the factory that actually makes the product**.
- 7. Capsules must be **vegetarian HPMC**. Bovine or porcine gelatin is not accepted.

2. The six products

How to read the two columns: "Target" is what we will pay a premium for. "Minimum acceptable" is the floor, and below it we do not buy. Quote the target first. If you cannot reach it, quote the minimum and state plainly which line you could not meet and why.

1. Sea Moss Complex Gummies

60 per bottle, serving 2 gummies, berry flavour, pectin base

Line	Target	Minimum acceptable
Irish sea moss (Chondrus crispus)	1,500 mg	1,000 mg
Bladderwrack (Fucus vesiculosus)	500 mg	300 mg
Burdock root (Arctium lappa)	150 mg	100 mg
Iodine per serving	Measured and declared	Pass or fail: never above 225 mcg

Iodine is the hard constraint. If the raw material pushes iodine over the ceiling, reduce the sea moss rather than exceed it, and tell us the resulting figure.

2. Ashwagandha Gummies

60 per bottle, serving 2 gummies, pectin base

Line	Target	Minimum acceptable
Ashwagandha root extract	600 mg KSM-66	500 mg, standardised to 5% withanolides
Plant part	Root only	Pass or fail. Leaf extract is not accepted

3. Lion's Mane Gummies

60 per bottle, serving 2 gummies, berry flavour, pectin base

Line	Target	Minimum acceptable
Lion's mane extract 10:1 (Hericium erinaceus)	750 mg	500 mg
Part used	Fruiting body only	Pass or fail
Beta glucans	30% minimum, enzymatic assay	20%, enzymatic assay
Not accepted	Mycelium on grain, starch carriers, flour dilution	

The beta glucan figure decides whether we buy. Starch is not beta glucan, and an iodine stain is not an assay. Do not quote this item if you cannot supply the enzymatic assay.

4. Tongkat Ali Capsules

60 per bottle, serving 1 capsule, vegetarian capsule

Line	Target	Minimum acceptable
Eurycoma longifolia root extract	400 mg of 200:1, or LJ100 100 mg (40% glycosaponins, 22% eurypeptides)	200 mg of 100:1
Heavy metals	Every batch, measured numbers	Pass or fail. This root concentrates mercury and lead

5. L-Theanine Capsules

60 per bottle, serving 1 capsule, vegetarian capsule

Line	Target	Minimum acceptable
L-theanine	200 mg Suntheanine	200 mg , fermentation derived
Not accepted		Synthetic racemic mixture

6. Saffron Extract Capsules

60 per bottle, serving 1 capsule, vegetarian capsule

Line	Target	Minimum acceptable
Saffron extract (Crocus sativus L., stigma)	30 mg branded affron or Satiereal , with certificate of authenticity	28 mg , standardisation stated
Authenticity	Branded extract plus Tru-ID or equivalent	HPLC per ISO 3632 and written confirmation that no geniposide , the gardenia marker, is present

Saffron is the most adulterated botanical in this category. Gardenia is routinely sold as saffron and it passes a colour test. **We test for geniposide. A quotation with no answer on authenticity is not considered.**

3. Gummy and capsule quality (pass or fail)

Gummies: - Pectin base, vegan, no gelatin - **Must not stick to each other** in the bottle at 25 °C, and must not rely on a separating agent that shows as a white dust - Must **stay soft through the stated shelf life**, not harden and not crystallise. Send the stability data that supports that shelf life - Natural colours from fruit and vegetable juice, no synthetic dyes - The active must leave no unpleasant aftertaste. If the raw material is bitter, tell us how it is masked

Capsules: - Vegetarian HPMC capsule - **Disintegration within 30 minutes** by USP method, with the measured time written in the report - Fill weight variation within USP limits, figure stated - No unnecessary flow agents. If magnesium stearate is used, say so and give the amount

Sweetener system (gummies): target is **allulose plus Reb M**; minimum acceptable is Reb M, or stevia blended with monk fruit. Erythritol minimised, and declared if used.

4. Packaging

- White HDPE bottle, induction seal, child resistant cap
- Wrap label. Tell us whether you print and apply labels, and the lead time either way
- Empty imprint zones for **LOT** and **Best By** on every bottle
- Barcode zone left clear. **We supply the GTIN**

5. What your quotation must contain

1. **Which of the six you already have as a stock formula**, and the exact dose in each
2. Price per bottle at **1,000 / 2,500 / 5,000** bottles, label applied
3. **Minimum order quantity** per product
4. **Working days** from label artwork approval to finished bottles shipped
5. Whether you print and apply the labels or we supply them
6. **Full ingredient list with milligrams** for every product quoted, so we can check it against this document before ordering
7. Your **NSF or cGMP registration number** (we verify it in the public register)
8. Sample lead time and cost. **We would like samples of your stock formulas this week.**

Samples to: 19900 E Country Club Dr, Apt 410, Aventura, FL 33180, USA

6. Four documents to have ready on site

Please have the originals available. Our representative will photograph them during the visit.

1. **Business licence** (18 digit unified social credit code)

2. **Food production licence (SC licence)**, with the categories confirmed: gummies need **confectionery**, powders need **beverages**
 3. The **production record** for any recent batch
 4. The **certificate of analysis** for the lion's mane extract you currently use, showing the beta glucan percentage and the words fruiting body
-

7. Note on the second wave

Four further products are planned as drink sticks: magnesium, mushroom coffee, daily electrolytes and beetroot. They are not part of this enquiry because our quantities do not yet reach the minimum for a stick pack line. **If you run a stick pack line, tell us your minimum and we will plan around it.**
