

REQUEST FOR QUOTATION

Buyer: 518 Group LLC, 7901 4th St N, Suite 300, St. Petersburg, FL 33702, USA
Brand: The Aldera · thealdera.com
Contact: Aleksandr Orlov, aleksor@thealdera.com
Date: 23 September 2026
Market: United States. All products sold as dietary supplements under 21 CFR 111 and 101.36.

What we are asking for

We are launching six products this autumn and we are choosing a manufacturer now.

We want your stock formulas under our own label, not custom development. The specifications in Part B are the standard we measure against, not a brief for your R&D department. Tell us which of your existing formulas come closest, give us the dose sheet, and quote them. Where a formula of yours already meets the minimum column, say so and quote it as it is.

If you also offer custom work, tell us the extra cost and the extra time separately, so we can compare the two paths.

PART A: TIMING, PLEASE ANSWER THESE FIRST

Lead time decides which manufacturer we work with, so these come before price.

1. From a confirmed order, how many **working days** until finished units are ready, at **1,500 units per product**?
2. Do you hold any of these as **finished stock**, so the job would be labelling only? If so, which ones, and how long does labelling alone take?
3. How long if **you print and apply** the labels, and how long if **we supply** them printed?
4. How long to produce **samples**, and can they ship this week?
5. Shipping time and cost to **Aventura, Florida**.
6. Can you ship directly into **Amazon FBA** with the required prep, and does that change the timing?
7. **If we place the order next week, what is the realistic date the units are in our hands?**

PART B: THE SIX PRODUCTS

Two columns throughout. **Target** is what we want and will pay a premium for. **Minimum acceptable** is the floor, below which we do not buy. Quote the target where you can reach it. Where you cannot, quote the minimum and say plainly which line you missed and why.

1. Magnesium, drink stick

30 sticks per box. One stick per serving. Sugar free.

Line	Target	Minimum acceptable
Elemental magnesium	200 mg	150 mg
Form	A form that dissolves completely in cold water , for example magnesium lactate, magnesium citrate, or an effervescent carbonate plus acid system	Any form, provided it passes the dissolution test below
Dissolution	Pass or fail. One stick in 250 ml of cold water, stirred for 30 seconds, must leave no visible sediment and no cloudiness	
Sweetener	Allulose plus Reb M	Reb M, or stevia with monk fruit
Flavour	Natural, berry or citrus	

Please read the dissolution line carefully. We have already rejected one supplier over this. Magnesium bisglycinate does not dissolve in a drink format and leaves sediment at the bottom of the glass, whatever the label says. If your stock formula uses bisglycinate, tell us, and tell us what you would use instead.

2. Daily electrolytes, drink stick

30 sticks per box. One stick per serving. Sugar free.

Line	Target	Minimum acceptable
Sodium	800 mg	500 mg
Potassium	300 mg	200 mg
Magnesium	80 mg	60 mg
Dissolution	Pass or fail, same test as above	
Sweetener	Allulose plus Reb M	Reb M, or stevia with monk fruit
Positioning	Everyday hydration, not sports nutrition	

A sodium figure under 400 mg does not work in this category and we will not quote it to our customers as an electrolyte product.

3. Ashwagandha

60 gummies or 60 capsules per bottle. Tell us which you run.

Line	Target	Minimum acceptable
Ashwagandha root extract	600 mg KSM-66	500 mg, standardised to 5% withanolides
Plant part	Root only	Pass or fail. Leaf extract is not acceptable

4. Lion's mane

60 gummies per bottle. Serving: 2 gummies.

Line	Target	Minimum acceptable
Lion's mane extract 10:1, Hericium erinaceus	750 mg	500 mg
Part used	Fruiting body only	Pass or fail
Beta glucans	30% minimum, enzymatic assay	20%, enzymatic assay
Not acceptable	Mycelium on grain, starch carriers, flour dilution	

The beta glucan figure decides whether we buy. Starch is not beta glucan and an iodine stain is not an assay. Please quote this item only if you can supply the enzymatic assay.

5. Sea moss complex

60 gummies per bottle. Serving: 2 gummies. Pectin base.

Line	Target	Minimum acceptable
Irish sea moss, Chondrus crispus	1,500 mg	1,000 mg
Bladderwrack, Fucus vesiculosus	500 mg	300 mg
Burdock root, Arctium lappa	150 mg	100 mg
Iodine per serving	Measured and declared	Pass or fail: never above 225 mcg

Iodine is the controlling constraint. If the raw material pushes iodine above the ceiling, reduce the sea moss rather than exceed it, and tell us the resulting figure.

6. Sixth product, quote whichever you have

We are deciding between two and would like to see both if you run both.

Option A, collagen

Line	Target	Minimum acceptable
Hydrolysed collagen peptides, types I and III	5,000 mg per serving	2,500 mg
Source	Marine	Bovine, stated
Format	Powder stick or gummy	

Option B, apple cider vinegar

Line	Target	Minimum acceptable
Apple cider vinegar with the mother	1,000 mg per serving	500 mg
Format	Gummy, pectin base	

PART C: QUALITY, PASS OR FAIL

These apply to every product and have no second column.

- Pectin gummy base, vegan. No gelatin.**
- Vegetarian HPMC capsules.** No bovine or porcine gelatin.
- No maltitol, isomaltitol, sorbitol, sucralose, aspartame, acesulfame K, added sugar or plain stevioside.**
- Fruiting body only** in mushroom products. No mycelium on grain.
- Certificate of analysis for every batch** from an ISO 17025 laboratory, **with measured numeric results.** A report stating only "complies" or " ≤ 1.0 ppm" instead of the measured value is not accepted.
- Certificates must carry the **legal name of the facility that actually manufactures the goods.**
- Heavy metals within California Proposition 65 limits.
- Gummies must **not stick together** in the bottle at 25 °C and must **stay soft through the stated shelf life.** Please send the stability data supporting the shelf life you state.
- Natural colours from fruit and vegetable juice. **No synthetic dyes.**
- Every active declared **individually, with its own milligram figure.** A blend stated only as a total is rejected.

On allergens. Please describe how allergens are separated on your line, and confirm that every ingredient will appear on the label under its common or usual name.

PART D: PACKAGING

- Bottles: white HDPE, induction seal, child resistant cap, wrap label
- Sticks: 30 count carton, tell us your stock carton size and whether the die line is yours
- Empty imprint zones for **LOT** and **Best By** on every unit
- Barcode zone left clear. **We supply the GTIN**

PART E: WHAT YOUR QUOTATION NEEDS TO CONTAIN

- Which of the six you already have as a stock formula**, with the exact dose in each
- Price per unit at 1,000 / 1,500 / 2,500 / 5,000 and 10,000 units**, per product, with the label applied
- Minimum order quantity** per product, and separately your minimum for a stick pack run
- Lead times, as asked in Part A
- Whether you print and apply labels, and the lead time either way
- Full ingredient list with milligrams** for every product you quote, so we can check it against this document before ordering
- Your **NSF or cGMP registration number**, so we can verify it in the public register
- Sample lead time and cost. **We would like samples this week.**
- Payment terms, and the legal entity that receives payment

Samples to: 19900 E Country Club Dr, Apt 410, Aventura, FL 33180, USA

How we decide

We compare on four things, in this order: **lead time, dose against the table above, the certificate of analysis, and price.** A quotation that answers Part A and Part E in full will get an answer from us the same day.

Thank you for your time.
